Curriculum Vitae

Research Interests

- Exoplanet Atmospheres
- Planetary Evolution
- Radiative Transfer Models
- Machine Learning

Education

2018–present **Doctoral student**, *University of Bern*, Switzerland.

Supervisors Prof. Dr. Kevin Heng, Prof. Dr. Christoph Mordasini

Description My research lies in the intersection between exoplanet atmospheres, planet interiors and machine learning and aims at understanding how we can couple our knowledge about the interior and the atmosphere of exoplanets.

2016–2018 **Erasmus Mundus Joint Masters Degree in Astronomy and Astrophysics**.

- 1st Semester: Leopold-Franzens-Universität Innsbruck, Austria
- 2nd Semester: Università degli Studi di Roma Tor Vergata, Rome, Italy
- 3rd & 4th Semester: Georg-August-Universität Göttingen, Germany

Thesis *Probing the exoplanet's HD189733b atmosphere using CARMENES' Rossiter-McLaughlin observations.*

Supervisors Prof. Dr. Ansgar Reiners, Dr. Mahmoudreza Oshagh.

Description It is known that the amplitude of the Rossiter-McLaughlin effect depends on the effective size of the planet, and in the case of an atmospheric contribution it depends on the observed wavelength. The aim of this work is to use the chromatic-Rossiter McLaughlin effect to retrieve the transmission spectrum of HD 189733b using HARPS data and expand the wavelength coverage with CARMENES data.

2010–2015 **Bachelor of Science in Mathematics**, *Universidad Sergio Arboleda*, Bogotá, Colombia.

Thesis *Analysis and Simulation of Earth-to-Moon trajectories.*

Supervisor Dr. Jorge Alberto Sóliz.

Description This work presents the results of a simulated trajectory from Earth to Moon using the Patched Conic Method integrated with the Rungekutta 78 Method in FORTRAN.
